

WRLFMD Quarterly Report

October to December 2015

Reference Laboratory Contract Report

Foot-and-Mouth Disease

Contents

1. Global Summary.....	3
2. Summary of samples.....	7
3. Virology Results	8
4. Detailed Sequence Analysis.....	14
5. Vaccine matching	29
6. Vaccine strain recommendations	30
7. Recent FMD publications	31

1. Global Summary

1.1. Africa

Botswana

Two samples, collected in June 2015 from cattle at Kasane, Chobe, were received from the BVI. They were typed as **SAT 1** and genotyped as **topotype III (WZ)**.

Morocco

Between 23/10/2015 and 11/11/2015, FMD **type O** was reported in cattle at six locations in the Casablanca-Settat region. FMD **type O** viruses were isolated from three samples received in November. They were genotyped as ME-SA/Ind-2001d and were most closely related to viruses from outbreaks in Algeria and Tunisia.

Mozambique

A single FMD **type SAT 2** virus was isolated from one of two samples (collected from cattle in May 2015) received from the BVI. It was genotyped as **topotype I**.

Namibia

One virus isolate and five epithelium samples (collected in May 2015) were received from the BVI. **FMDV type SAT 1 (topotype III)** was identified in the virus isolate, but it was very closely related to the reference/vaccine strain SAT1/BOT/1/77, so may be a laboratory contaminant. **FMDV type SAT 2** was isolated from the five samples and genotyped as **topotype III**.

Niger

A single **FMD type O** virus was isolated from four samples received from the BVI. Genotyping will be reported later.

South Africa

A single outbreak of **FMD SAT 3** was reported to have occurred in cattle at Thulamela, Limpopo on 08/12/2015. No genotyping has so far been reported. The outbreak occurred in cattle at one dip tank within South Africa's FMD protection zone and therefore has no effect on South Africa's FMD free status.

Sudan

A batch of 37 samples was received in December and results are pending.

Zambia

An outbreak of **FMD type SAT 3** has occurred for the first time in Zambia in October 2015. Cattle were affected at Lupuka, Shangombo, Western province, close to the border with Angola where the Longa-Mavinga National Park is located. Sequences of two viruses received from the BVI show the causative agent to belong to **topotype II (WZ)** and not to be closely related (>11% nt difference in VP1) to any other SAT 3 sequence in the WRLFMD database.

Zimbabwe

Between 20/08/2015 and 01/10/2015, 14 outbreaks of FMD were reported in cattle in the Midlands, Mashonaland West, Matabeleland North, Matabeleland South and Masvingo Provinces. Eight were identified as **type SAT 2**, but the others were reported as untyped.

A single FMD **type SAT 2** virus was isolated from three samples received from the BVI. It was genotyped as topotype II.

Nineteen samples, collected from cattle in Midlands, Matabeleland North, Masvingo and Manicaland provinces between April and August 2015, were also submitted directly from Zimbabwe. FMD **types SAT 1, SAT 2** or, in one case, a mixture of **SAT 1** and **SAT 2** were isolated. Genotyping revealed the presence of either SAT 1 topotype II or SAT 2 topotype II; however, in the case of one of the SAT 2 isolates and the mixed isolate, sequencing proved to be difficult, probably due of mixed virus infections.

1.2. Asia

Cambodia

Five FMDV isolates were received from the RRL at Pakchong. Typing/genotyping identified **O/ME-SA/PanAsia** in two samples and **A/ASIA/Sea-97** in the other two and one was NVD. Although FMDV Asia 1 was suspected in two of the samples, no evidence of the presence of this serotype could be found.

Hong Kong SAR

FMD type O was isolated from six samples from pigs collected in Hong Kong in September and November 2015. Genotyping revealed all to belong to the **CATHAY topotype**.

Iran

A batch of 27 samples was received from Iran. The typing/genotype results of 25 of these are pending, however, in two samples **FMD type A** was identified. Genotyping of the two virus isolates (collected from cattle in Qom province in August and September 2015) revealed the introduction into the country of a new virus strain, currently known as **G-VII** (sometimes also called G-18) belonging to the **ASIA topotype**. Closely related viruses are normally found in the Indian subcontinent, but have recently been identified in Saudi Arabia and eastern Turkey (see elsewhere in this report).

Israel

Two outbreaks of **FMD type O** were reported in pigs and cattle during November 2015 in the Hazafon (Northern) district. No genotyping has been reported.

Laos

Four **FMD type O** virus isolates were received from the RRL at Pakchong. Genotyping revealed them to belong to the O/ME-SA/Ind-2001d lineage. This is the first report of this lineage in Southeast Asia.

Mongolia

In October 2015, an outbreak of **FMD type O** occurred in cattle, sheep and goats in Toshin sub-district, Altai district, Bayan-Ölgii province (in a small valley surrounded by high mountains located at the western edge of Mongolia). No genotyping has been reported.

Myanmar

Five FMDV isolates were received from the RRL at Pakchong. The original samples had been collected from cattle in Mandalay State in October 2015. Three were identified as **FMDV type A/ASIA/Sea-97** and two as **type O/SEA/Mya-98**.

Pakistan

A batch of 35 samples was received in December and results are pending.

Saudi Arabia

Outbreaks of FMD were reported on two farms in the Riyadh area in September and October 2015. **FMDV type A** was isolated from samples received from the two farms and also a third farm in the same area. Genotyping identified the virus responsible as **A/ASIA/G-VII** (also known as G18), closely related to viruses from the Indian sub-continent and to viruses from recent outbreaks in Iran and Turkey (see elsewhere in this report).

Thailand

A batch of 21 virus isolates was received from the RRL in Pakchong. Typing/genotyping is pending.

Turkey

Twenty-eight samples, which had been collected from cattle between August 2014 and May 2015, were received from the FMDI-Ankara. FMD viruses were isolated from 25 of the samples; four were typed/genotyped as **O/ME-SA/PanAsia-2^{FAR-09}**, 14 as **A/ASIA/Iran-05^{SIS-10}** and five as **Asia 1/ASIA/Sindh-08**; however, a further two Asia 1 viruses lay slightly outside the Sindh-08 lineage and were left unclassified.

Three outbreaks of **FMD type A** were reported in Van, Bitlis and Amasya provinces during September and October 2015. A single VP1 sequence (from a virus isolate from Van province) was received from the FMDI-Ankara and phylogenetic analysis showed it was **A/ASIA/G-VII** closely related to viruses from the Indian subcontinent and from recent outbreaks in Saudi Arabia and Iran.

1.3. South America

No outbreaks reported

1.4. Uncharacterised FMD viruses

A number of outbreaks have occurred where samples have not been sent to the WRLFMD. It is probable that the countries involved have performed their

own genetic characterisatio11n; however, through the OIE/FAO Laboratory Network we would also like to encourage the submission of samples (or complete VP1 sequences) to the WRLFMD.

STOP PRESS

Armenia

FMDV type A/ASIA/G-VII has been reported to have begun on 23/12/2015 in Armavir, Arazap, Armenia in cattle and pigs. Genotyping was performed by FGI-ARRIAH. These outbreaks provide further evidence of the rapid spread of this lineage in West EurAsia.

Republic of Korea (South Korea)

FMDV type O/SEA/Mya-98 has been reported in pigs at Gimje, Jeonbuk on 11/01/2016. Sequencing was performed at the Animal and Plant Quarantine Agency and analysed at the WRLFMD.

An up-to-date list and reports of FMD viruses characterised by sequencing can be found at the following website: http://www.wrlfmd.org/fmd_genotyping/2015.htm.

2. Summary of samples

Summary of samples collected and received by WRLFMD® (October to December 2015)

Country	Nº of samples	Virus isolation in cell culture/ELISA								rRT-PCR for FMD (or SVD) virus (where appropriate)	
		FMD virus serotypes								NVD	Positive
		O	A	C	SAT 1	SAT 2	SAT 3	Asia 1	Negative		
CAMBODIA	5	2	2	-	-	-	-	-	1	4	1
HONG KONG, SAR OF PRC	7	6	-	-	-	-	-	-	1	7	-
IRAN	27	-	2	-	-	-	-	-	-	2	-
LAOS	4	4	-	-	-	-	-	-	-	4	-
MOROCCO	3	3	-	-	-	-	-	-	-	2	1
MYANMAR	5	2	3	-	-	-	-	-	-	5	-
PAKISTAN	35	-	-	-	-	-	-	-	-	-	-
SUDAN	37	-	-	-	-	-	-	-	-	-	-
THAILAND	21	-	-	-	-	-	-	-	-	-	-
SAUDI ARABIA	4	-	4	-	-	-	-	-	-	4	-
TOTAL	148	17	11	-	-	-	-	-	2	28	2

Sample results pending from previous report:

TURKEY	28	4	14	-	-	-	-	7	3	25	3
ZIMBABWE ¹	19	-	-	-	5	13	-	-	2	15	4
TOTAL	47	4	14	-	5	13	-	7	5	40	7

¹ One sample from Zimbabwe had a mixed serotype of SAT 1 and SAT 2.

Abbreviations used in table:

VI / ELISA	FMD (or SVD) virus serotype identified following virus isolation in cell culture and antigen detection ELISA
FMD	foot-and-mouth disease
SVD	swine vesicular disease
NVD	no FMD, SVD or vesicular stomatitis virus detected
NT	not tested
rRT-PCR	Real-time reverse transcription polymerase chain reaction for FMD (or SVD) viral genome

3. Virology Results

Detailed virology results for clinical samples tested by the WRLFMD® (October to December 2015)

Country	WRL for FMD Sample Identification	Species	Date of Collection	Results

TOTAL:		47			

Abbreviations used in table:

FMD(V)	Foot-and-mouth disease (virus)
FMDV GD	Genome detected
FMDV NGD	Genome not detected (samples submitted in Trizol, only rRT-PCR carried out)
VI/ELISA	FMDV serotype identified following virus isolation in cell culture and antigen ELISA
rRT-PCR	Real-time reverse transcription polymerase chain reaction on epithelial suspension for FMD (or SVD) viral genome
NVD	No foot-and-mouth disease, swine vesicular disease or vesicular stomatitis virus detected
NT	Not tested

4. Detailed Sequence Analysis

An up-to-date list and reports of FMD viruses characterised by sequencing can be found at the following website: http://www.wrlfmd.org/fmd_genotyping/2015.htm.

Results from samples received at WRLFMD (status of samples being tested) are shown in the table 4-1 and a summary of all samples received by WRLFMD for this period is shown in chapter 2. A complete list of clinical sample diagnostics made by the WRLFMD between October to December 2015 is shown in chapter 3.

Table 4-1: Status of sequencing of samples received by the WRLFMD from October to December 2015 (*) indicates samples carried over from the last quarter)

WRLFMD Batch No.	Date received	Country	Serotype	No. of samples	No. of sequences	Sequencing status
WRLFMD/2015/00015	12/08/2015	Turkey	O	4	4	Completed

5. Vaccine matching

Antigenic characterisation of FMD field isolates by vaccine matching by 2dm VNT from October to December 2015.

Table 1: Serotype O

Sample		Vaccine Strain			
Field Virus Reference	Topotype	O 3039	O Manisa	O/TUR/5/09	O/Russia/00
O/MOR/1/2015	O/ME-SA/Ind-2001	M	N	M	NT
O/MOR/2/2015	O/ME-SA/Ind-2001	M	B	M	NT
O/HKN/1/2015	O/CATHAY	Previously Reported			M
O/HKN/2/2015	O/CATHAY				M

Table 2: Serotype A

Sample		Vaccine strain							
Reference	Topotype	A Iran 2005	A IRN 87	A IRN 96	A IRN 99	A MAY 97	A SAU 95	A TUR 20/06	A22 IRQ
A/SAU/1/2015	A/ASIA	N	N	N	N	N	N	N	N
A/SAU/2/2015	A/ASIA	N	N	N	N	N	N	N	N
A/IRN/12/2015	A/ASIA	N	NT	NT	NT	N	N	N	N
A/IRN/8/2015	A/ASIA	N	NT	NT	NT	N	N	N	N

Table 3: Serotype SAT 1

Sample		Vaccine strain
Reference	Topotype	SAT105 RHO
SAT 1/BOT/1/2015	SAT 1/III (WZ)	M
SAT 1/BOT/2/2015	SAT 1/III (WZ)	M

Abbreviations used in tables:

M	Vaccine Match- $r_1 = \geq 0.3$. Suggests that there is a close relationship between field isolate and vaccine strain. A potent vaccine containing the vaccine strain is likely to confer protection.
N	No Vaccine Match - $r_1 = < 0.3$. Suggests that the field isolate is so different from the vaccine strain that the vaccine is unlikely to protect
Borderline	Any r_1 values between 0.28 to 0.32
NT	Not tested against this vaccine

6. Vaccine strain recommendations

RECOMMENDATIONS FROM WRLFMD® ON FMD VIRUS STRAINS TO BE INCLUDED IN FMDV ANTIGEN BANKS (FOR FMD-FREE COUNTRIES) – December 2015

Note: Virus strains are NOT listed in order of importance

High Priority	A/ASIA/G-VII(G-18)* O Manisa O PanAsia-2 (<i>or equivalent</i>) O BFS or Campos A24 Cruzeiro Asia 1 Shamir A Iran-05 (<i>or A TUR 06</i>) A22 Iraq SAT 2 Saudi Arabia (<i>or equivalent i.e. SAT 2 Eritrea</i>)
Medium Priority	A Eritrea SAT 2 Zimbabwe SAT 1 South Africa A Malaysia 97 (<i>or Thai equivalent such as A/Sakolnakorn/97</i>) A Argentina 2001 O Taiwan 97 (<i>pig-adapted strain or Philippine equivalent</i>)
Low Priority	A Iran '96 A Iran '99 A Iran 87 or A Saudi Arabia 23/86 (<i>or equivalent</i>) A15 Bangkok related strain A87 Argentina related strain C Noville SAT 2 Kenya SAT 1 Kenya SAT 3 Zimbabwe

NB: Discussions are currently underway to adopt a risk-based approach for different FMD viral lineages to identify priority vaccines for use in Europe and other FMD-free settings.

*Recent in-vitro data from WRLFMD for serotype A viruses from Saudi Arabia and Iran highlights an apparent gap in vaccine coverage. Work is urgently required to evaluate whether there is adequate in-vitro match with Indian vaccine strains (A/IND/40/2000) or whether in-vivo protection may be provided by high potency international vaccines.
